Spagmoss.

Supreme	
Species:	Sphagnum cristatum
Length:	Premium grade with 80%longer than 175mm
Colour:	Bright natural colour showing white/cream with some green tips
Contamination:	Very minimal to nil foreign material
Features:	Good bulk and thickness which allows excellent water retention giving good
	aeration and fertiliser holding. Very easy for root wrapping due to longer
	length with a beautiful aesthetic value. Long lasting in the pot.
Application:	Commercial

Premier+	
Species:	Sphagnum cristatum
Length:	High quality grade with 60% longer than 175mm
Colour:	Bright natural colour with some duller colour permitted if it is thick in nature.
	Still shows white/cream and can have some green tips
Contamination :	Very minimal foreign material
Features:	A reasonably bulky moss however thickness can vary. This still allows
	excellent water retention giving good aeration and fertiliser holding. Very easy
	for root wrapping due to longer length with a good aesthetic value. Long
	lasting in the pot.
Application:	Commercial

Premier	
Species:	Sphagnum cristatum
Length:	Good quality grade with 50% longer than 150mm
Colour:	Various golden browns, cream and light greens
Contamination:	Light foreign material
Features:	Good bulk which allows excellent water retention giving good aeration and
	fertiliser holding.
	Very easy for root wrapping due to longer length. Long lasting in the pot
Application:	Commercial

Classic	
Species:	Sphagnum cristatum
Length:	Average quality grade with 70% longer than 100mm
Colour:	Various golden browns, browns, cream and light greens. May contain stained or dull ends.
Contamination:	Light foreign material
Features:	Thickness can vary throughout product however water retention is good giving good aeration and fertiliser holding. A good average moss
Application:	Standard retail and some hobby. Good for lining baskets

At the root of healthier plants.

Spagmoss.

Blended	
Species:	Sphagnum cristatum/Sphagnum subnitens
Length:	Average guality grade 70% longer than 100mm
Colour:	Various golden browns, browns, cream, light green and pink. Some light
	staining may be present
Contamination:	Light to medium
Features:	Is considered more as a budget grade as the species cannot be separated due
	to mixed species in the swamp. Can contain good bulk which allows excellent
	water retention giving good aeration and fertiliser holding.
Application:	Commercial and budget retail
